Welcome to BindLens

Your documents, bound into books.

1. Add your folders and documents

Click + (under the book icons, or next to Library): add a folder - each book reads one folder as one continuous document - or loose documents, each one a book of its own. Any kind: PDF, Word, Excel, PowerPoint, pictures, .csv, .rtf… Your files stay where they are, and new files saved there appear by themselves. Any other folder, wherever it is, can be shown inside a book as a sub-book. Click a book's icon 3 times for its icon: folders, letters, dates, work, people…

2. Mark your PDFs

Select text: a small bar appears - a colour highlights, U underlines, S strikes through.

- Text: click on the page and type. The bar above changes the look - speech bubble, label, banner, info box… - the font, size, colours and alignment.
- Sticky notes: push pin, tape, clip or magnet, folded or curled paper, text colour, even a photo inside.
- Shapes you can fill with colour and write in: box, circle, diamond, arrow, star…
- Stamps and signatures: Approved, Paid, Done… or your own.
- Click any mark to move it, resize it from its corner, or turn it with the round handle.

Everything is saved inside the original PDF - and locked in other PDF readers, so only BindLens can change it.

3. Write your own pages

The page + button opens a page editor like a simple Word - tabs Home, Insert, Page, and Table / Picture when you click one: table styles and colours, merged cells, pictures you can resize, crop and put beside the text, page breaks, a preview of the real page. Templates: letter, meeting notes, to-do list, invoice, weekly planner… Double-click a written page to edit it again.

4. Find and report

- The search box finds a document by its name - it doesn't have to be exact: week 38, wk38 - or a word inside. Ctrl+F searches the open book, Ctrl+K everything.
- Ctrl+R (or the Reports button): a simple list - Extract data (emails, names, phones, addresses, dates, amounts…), Tables (rows and columns exactly as they are), Find, Text analysis (word count, summary), Documents, Dates, Data quality. Choose one, then tick only what to include: the person, the document, the page…
- Rows exactly as they look: a picture of every row with a name, with its table's title and column titles on top, from every file.

5. Make it yours

Click the logo: themes, accent colour, app icon, and what is behind your pages - gradients that flow, textures (paper, linen, wood), bubbles, clouds, rain on glass, aurora, the season… or a photo from the gallery or your own. Beside the page: a map of the whole book (with the chapters of a big PDF - click one to go there) and a clock with your next deadline. Click a book's icon 3 times to change it and write your own text on it. Leave BindLens alone for a while: a night sky where the lens finds the pieces of the logo and puts it together.

Shortcut	What it does
Ctrl+K	Find anywhere
Ctrl+R	Reports
Ctrl+Z / Ctrl+Y	Undo / redo
F9	Library panel
F11	Full screen
[and]	Turn the selected note or stamp
